PROJECTS

Task Web Application

- Tech used: TypeScript, React.js, Redux, Material UI, Node.js, Express, MongoDB
- Features authentication to let users sign in and sign up
- Permit users to create/read/update/delete a particular task
- Provides a way to toggle user roles or delete a user for users with an admin role specified

Cryptocurrency Web Application

- Tech used: TypeScript, React.js, Redux, Chart.js, Chakra UI
- Provides a way to view a list of global cryptocurrencies ranked from top to bottom using the CoinGecko API
- Indicates historical data of previous prices in the graph
- Depicts the price change percentage gains and losses for a specific time
- Can search for a coin and choose a currency to display price value based on the selected currency

E-commerce Web Application

- Tech used: React.js, Firebase, Commerce.js, Redux, Chakra UI
- Allow users to register or log in via Firebase Authentication
- Integrates a headless commerce back-end to display storefront products and categories and perform cart operations
- Can add or remove a product from both cart and favorites
